Hardy Azalea Hybrids

SPRING 1937

AZALEA HYBRID, No. 13G.

Two year cutting.

NEW HARDY AZALEA HYBRIDS

Would you like to be in on the introduction of our new azaleas before they are named? We have decided to offer you that opportunity. Listed below under number only, you will find sixty different azaleas. Out of some ten thousand hybrid seedlings we have selected through the years some two hundred for further observation. Of these we have selected for propagation and trial the sixty numbers listed here. All are outstanding and we find a final choice difficult.

Therefore we have decided to offer them in limited quantities to our customers, hoping to get a line on the most popular varieties before we make any further selection.

These hybrids have been made in the effort to originate a hardier strain of the Japanese type of azalea in better form and color than have heretofore been available in hardy varieties. We have agreeably surprised ourselves with the results and hope you will be pleased also.

As to hardiness these varieties will average harder than Azalea Hinodegiri or Amoena and much harder than the Kurumes. All have lived and flowered in the open field here in the Pennsylvania hills where they have withstood temperatures of twenty below zero and more in the last few winters with only negligible injury to a few. Most of them were quite uninjured.

Prices are for sizes available as listed under each number
